NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevatic (BFEs) and/or floodways have been determined, users are encouraged to conthe Flood Profiles and Floodway Data and/or Summary of Stillwater Elevatitables contained within the Flood insurance Study (FIS) report that accompare tables contained within the Flood Insurance Study (FIS) report that accompanies in FIRM. Uses should be aware that BFEs shown on the FIRM represent the FIRM of the shown on the FIRM represent the property of the should be shown on the FIRM representation and the should be shown on the FIRM representation and the shown of the should be should

Coastal Base Flood Elevations shown on this map apply only landward of 0.0 Noth American Vertical Datum of 1988 (NAVD 88). Users of this FRM should be aware that, coastal flood elevations are also provided in the Summary of Sillwater Elevations take in the Flood Insurance Study apport for this justication. Bellevations shown in the Summary of Sillwater Elevations show the Service Sillwater Elevations show the Service Sillwater Elevations show the Service Sillwater Elevations show the Period Service Sillwater Elevations show the Period Service Sillwater Elevations show the Service Ser

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydrautic considerations with regard to requirements of the National Flood Insurance Program, Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this invisidiction.

The projection used in the preparation of this map was Alazona Central State Plane zone FIPS-2001E (2022), International Feet, The horizontal datum was considered to the production of FIRMs for adjacent justification of State Plane zones used in the production of FIRMs for adjacent justification may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1989, visit the National Geodetic Survey website at National Geodetic Survey website at National Geodetic Survey at the following address:

NGS Information Services NOAA, N/NGS12 National Geodetic Survey SSMC-3, 92020 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from multiple sources. Base map imagery for eastern Pinna County was provided in digital format by the Pinna Association of Government. These data were developed at 1-food Ground Sample Distance (GSD) from color aerial photography flowin in 2002. Base map imagery for western Pinna County was derived from USGS largery available for the State of Artona and produced at a scale of 1-12,000 from photography dated 2008 and 2007.

This map may reflect more detailed and up-to-date stream channel configurations than those shown on the previous FRM for this justicidion. The floodpains and floodpains that were trainered from the previous FRM may have been adjusted to conform to these new stream channel configurations. As a result, the Frood Profiles are floodpains (balled in their Flood Instrumer Bouldy Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on the inner.

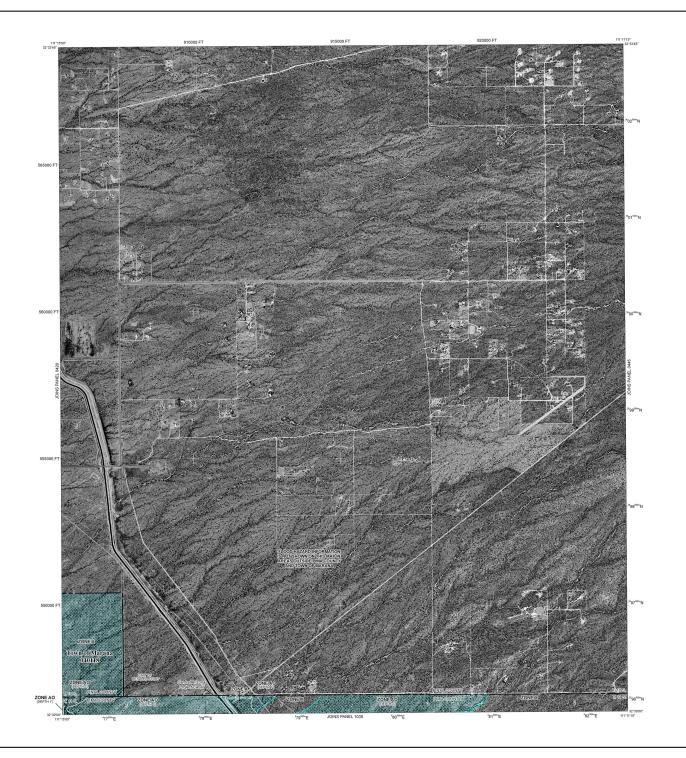

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, may users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels, community map repository addresses; and a Listing of Communities state containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

community is occured.

For informative is come and the products associated with this FIRM, visit the Map Service Center (MSC) website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Brood insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have questions about this map, how to order products, or the National Flood Insurance Program in general, please call the FEMA Map Information exchange (FMIX) at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/fnic

LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual fixed (100-year fixed), also lincen as the base fixed, is the fixed that has a 1% chance of being equaled or exceeded in any given year. The Special Flood lessand Area is the area subject to fixed have list bit amount of them fixed. Areas of Special Flood lessand ride of Cores, A, E, AH, AO, RA, 899, V, and VE. The Base Flood Elevation is the water-purface elevation of the Vannal of Area flood.

ZONE A No Base Flood Benations determined ZONE AE Base Flood Elevations determined.

Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined. Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Bevations determined ZONE A99

Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined. ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood

FLOODWAY AREAS IN ZONE AE

s the channel of a stream plus any adjacent floodplain areas that must be kept free nt so that the 1% annual chance flood can be carried without substantial increases

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS Areas determined to be outside the 0.2% annual chance floodplai

Areas in which flood hazards are undetermined, but possible. COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and CPAs are normally located within or adjacent to Special Flood Hazard Areas. 1% annual chance floodplain boundary

Floodway boundary

Zone D boundary CBRS and OPA boundary

Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

Limit of Moderate Wave Action ~~~ 513 ~~~ Base Flood Elevation line and value; elevation in feet*
