## NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The community map repository should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where Base Flood Elevations (BFEs) andor floodways have been determined, users are encouraged to consult the Flood Frolless and Floodway bear and For Summy of Sinstead Elevations of the Flood Frolless and Floodway bear and Floodway bear for Sinstead Elevations that the Flood Frolless and Floodway that the Flood Frolless and Floodway that the Flood Frolless and Floodway that the Flood Flood

Coastal Base Flood Elevations shown on this map apply only landward of 0.0 North American Vertical Datum of 1988 (NAVD 88), Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Sillivate Elevations table in the Flood Insurance Study sport for this jurisdiction. Blevations shown in the Summary of Sillivate Elevations table on the Summary of Sillivate Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the floodways were computed at cross sections and interpolated between cross sections. The floodways were based on hydrautic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood** control structures. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The projection used in the preparation of this map was Aizona Central State Plane zone (PPSZONE 0202), international Feet. The horizontal datum was considered to the project of the project of the project of the project of of State Plane zone used in the production of FRINE for adjacent justicitions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not first the accuracy of this FRIM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same vertical datum. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1989, with the National Geodetic Survey at the following address of the following addr

NGS Information Services NOAA, N/NGS12 National Geodetic Survey SSMC-3, #9202 1315 East-West Highway Silver Spring, Maryland 20910-3282 (301) 713-3242

To obtain current elevation, description, and/or location information for bench marks shown on this map, please contact the information Services Branch of the National Geodetic Survey at (301) 713-3242, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from multiple sources. Base map imagery for eastern Prima County was provided in digital format by Prima Association of Oevenments. These data were developed at 1-dos Ground Sample Distance (ISSD) from color series (photography flowin in 2002. Base map imagery for western Prima County was derived from ISSS largery available for the State of Altonia and produced at a scale of 1:12:000 from photography dated 2006 and 2007.

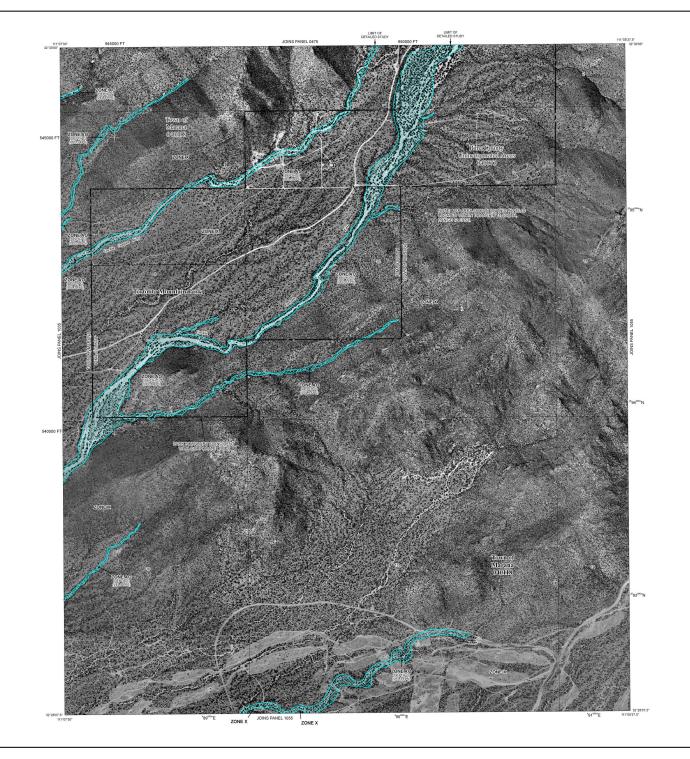

This map may reflect more detailed and up-to-date **stream channel** configurations than those shown on the previous FRM for this justicition. The floodpains and floodpains that were transferred from the previous FRM may have been adjusted to conform to these new stream channel configurations. As a result, the Frood Prolless and Floodpains (based in the Frood Instruance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this may.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this may was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed Map Index for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

community is located. For information on available products associated with this FIRM, visit the Map Service Center (MSC) webstle at <a href="http://msc.tema.gov">http://msc.tema.gov</a>. Available products may include previously issued Letters of Map Change, a Flood insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC vebstle.

If you have questions about this map, how to order products, or the National Flood Insurance Program in general, please call the FEMA Map Information exchange (FMX): at 1-877-FEMA-MAP (1-877-336-2627) or visit the FEMA website at <a href="http://www.fema.gov/business/infp.">http://www.fema.gov/business/infp.</a>

**LEGEND** 

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INJUNDATION

BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual flood (100-year flood), also intown as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% armsi chance flood. Areas of Special Flood Hazard Index Carces, A, E, AH, AO, RP, 869, V, and VE. The Base Flood Elevation is the water-surface elevation of the "Area" armsi chance flood.

ZONE A No Base Rood Elevations determined

ZONE AE Base Flood Elevations determined. Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood

ZONE A99

Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

oecomine.

Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system the was subsequently decentified. Zone AR indicates that the former flood cort orlystem is being restored to provide protection from the 1% annual chance or greater flood.

Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Bevations determined. Coastal flood zone with velocity hazard (wave action); no Base Flood

Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined. ZONE VE

FLOODWAY AREAS IN ZONE AE

e channel of a stream plus any adjacent floodplain areas that must be kept free o that the 1% annual chance flood can be carried without substantial increases

OTHER FLOOD AREAS ZONE X

Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 floot or with drainage areas less than 1 source mile; and areas protected by levees from 1% annual chance flood.

Areas determined to be outside the 0.2% annual chance floodplain

Areas in which flood hazards are undetermined, but possible. COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas

1% annual chance floodplain boundary 0.2% annual chance floodplain boundary

Zone D boundary

CBRS and OPA boundary

. . . . . . . ~~~ 513 ~~~ Base Flood Elevation line and value; elevation in feet\*

Base Flood Bevation value where uniform within zone; elevation in feet\* (EL 987) Referenced to the North An can Vertical Datum of 1988
